April 2008

Highly charged SuperCharge Gold powered Alfa Romeo Diesel makes it two wins in a row

Following its success in the WPS Bathurst 12 hours endurance race in Mount Panorama last February, the SuperCharge sponsored Alfa Romeo Diesel 147 JTD, using the latest GOLD MF55 battery has taken its second diesel class victory for the year. This second win came just one month later at the Auto Italia 800 km race in Canberra.

As in any gruelling endurance race, the durability and extra power of the race car's battery would come into play. The resounding victory of Alfa Romeo 147 not only proved the vehicle's outstanding performance but also the superior strength of SuperCharge Maintenance Free Gold battery.

The **SuperCharge Battery Gold MF55** is part of the SuperCharge Gold Series-powered by EXG Expanded-Calcium Grid Technology. This new technology provides superior grid strength within the cells, greater resistance to corrosion plus increased protection against heat and overcharging. The new Maintenance-Free batteries prove ideal for race conditions as there is no requirement for electrolyte top-up and dangerous acid spillage is eliminated. These features are backed by a 36 months warranty, representing one of the longest warranties in the battery industry

SuperCharge batteries are sold throughout Australia by leading tyre and accessory outlets, battery specialists, auto electrical and general mechanical workshops.
