GLADIATOR

ARMED FOR MORE STARTS

SuperCharge Batteries are manufactured by its parent company Ramcar. With over 100 years of experience and possessing state of the art manufacturing facilities, Ramcar is one of the fastest growing battery manufacturers in Asia and is committed to exceeding international quality standards.

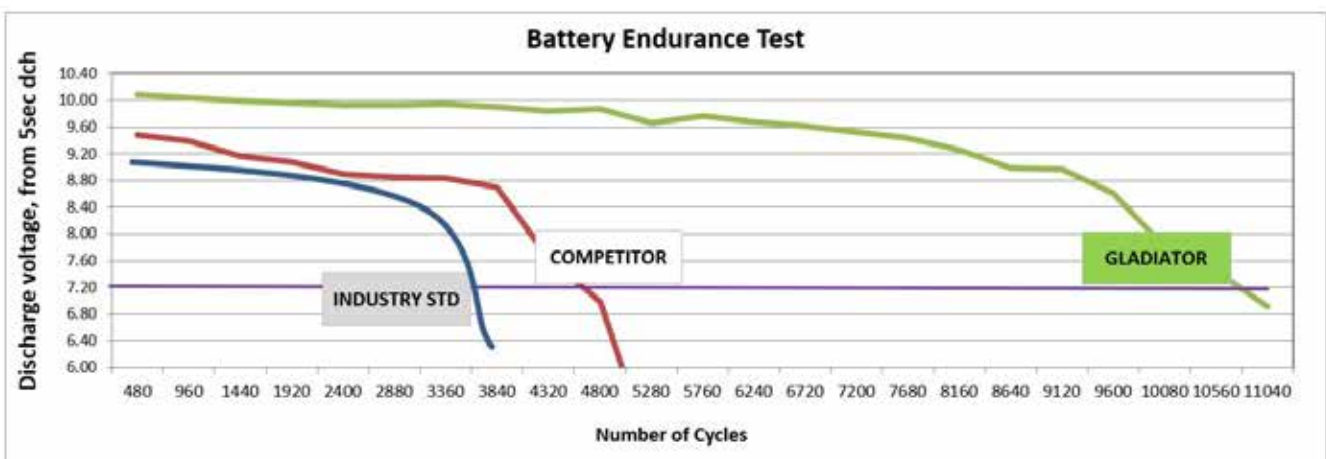

SuperCharge is proud to introduce its new range of climate balanced batteries. Gladiator's design considers the extreme Australian weather conditions that prevail during the four seasons. Whilst our GoldPlus, SilverPlus & Powerstation batteries continue to deliver superior power and durability, Gladiator is a premium option for those who are using their vehicle in the most demanding and toughest conditions that nature has to offer – from the hottest to the coldest. Gladiator is equipped with features and internal components that consistently give high performance in response to the ever-changing operating conditions without compromising long lasting durability.

Gladiator uses low profile plates intended to optimize the acid to material ratio helping prevent the battery from drying out. For better durability by minimizing grid growth and early failures due to shorts, the positive and negative grids are now fully framed. The lead connections and PE separators have been re-engineered for optimised capacity utilization and durability. Gladiator with anti-sulfation enriched electrolyte, delivers faster recharge times giving the benefit of more starts.

SuperCharge Gladiator is armed for more starts delivering longer life and superior performance under the toughest of operating conditions.

GLADIATOR BATTERY - WHY 80% MORE STARTS*

* Reference test: JIS 5301:2006

80% MORE STARTS*

1

DURA-CONNECTORS

- Re-engineered lead connections for a more efficient current flow helping achieve maximum capacity and better durability.
- Utilising improved processes and design to deliver stronger plate assembly bonding for better vibration resistance.

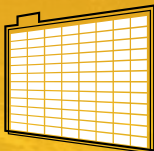

2

ELECTROLYTE PLUS

- Anti-sulfation enriched electrolyte to improve battery recharge ability for more starts.

3

PRO-FRAME

- Full framed grid design for both positive and negative plates for better durability.
- Plate design has been upgraded utilizing a Double-sided pasting process to help improve capacity and performance.

4

PE ULTRA SEPARATOR

- Increase separator thickness and improved strength resulting to better puncture resistance and durability.
